USB cable connection allows direct setting, sampling, recording and checking

①Connect DATA LOGGER and PC with USB cable

②Data is automatically collected after USB connection

③Control of temperature, humidity and shock is realized by user friendly graph display

Software   Data graph display and report generation software is attached as standard accessory
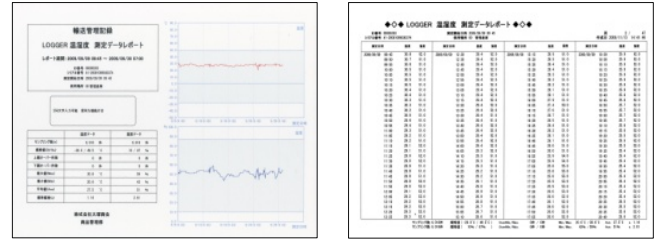

Graph display screen

Automatic data reading is available just by connecting the logger and PC with USB cable. Maximum value, minimum value, average value other than transitive value can be displayed on the screen.

Accessory software

Data collecting software is attached with the logger as standard accessory. Just installing it in the computer to start working immediately.

Report of recording certificate

Sampling data can be printed in report format. The data can be also stored in CSV format so that it can generate an original report.
